

Announcing Zoom Dementia Series Workshop: for Providers, Caregivers, Friends, and Advocates of Persons Living with Memory loss

Dr. Terry Barclay is a fellowship trained neuropsychologist with research and clinical expertise in aging and dementia. He received his doctorate in clinical psychology from Michigan State University with residency training in geropsychology at the West Los Angeles VA Medical Center. He went on to complete the NIMH postdoctoral program in neuropsychology at the David Geffen School of Medicine at UCLA where his research focused on the cognitive, behavioral, and psychological changes associated with normal aging, Alzheimer's disease, and other dementias.

He is currently the Director of Neuropsychology at HealthPartners and Regions Hospital in St. Paul and an Adjunct Associate Professor of Neurology at the University of Minnesota. He specializes in neurodegenerative disease and timely detection of cognitive impairment in the geriatric population. He has led the development of a range of evidence and consensus-based tools for healthcare providers that have been adopted and utilized by systems in Minnesota and around the country. Dr. Barclay also works with federal agencies and a wide variety of healthcare organizations to develop professional education curricula and instructional videos that are used to train physicians and other healthcare providers at major universities and healthcare systems throughout the U.S.

Dr. Barclay is the past Co-Chair of the Quality Healthcare and Detection Leadership Group of Minnesota's ACT on Alzheimer's, is a dementia consultant for the Minnesota Department of Human Services, served as Clinical Director of Minnesota's statewide program for dementia caregivers called Family Memory Care, and is the past Chair of the Medical and Scientific Advisory Council for the Alzheimer's Association Minnesota-North Dakota.

Diagnosis of Dementia: Why it Matters, How it's Done, and How it Can Help

Friday, October 29, 2021, 10-11:30am

Dr. Barclay will cover:

- Current procedures and tools used to diagnose dementia
- The importance of an early and accurate diagnosis and how this helps
- What happens during a memory loss work-up? What can we expect when we see the doctor?
- What types of reversible memory or cognitive impairment can be ruled out?
- How accurate is a dementia diagnosis?
- Can a primary care provider do the work-up or is a specialist recommended?
- What is the difference between mild cognitive impairment, dementia, and Alzheimer's disease?
- What are other common causes of memory loss?
- What are the best treatments and recommendations that can come from an accurate diagnosis?
- How caregivers can help

Advance Registration is required at this link:

<https://www.eventbrite.com/e/diagnosis-of-dementia-why-it-matters-how-its-done-and-how-it-can-help-tickets-187324732317>

The Zoom link & handouts will be sent to registrants before the session.
Sorry, no CEs or certificates are available for this presentation.

For questions about the workshops please contact:
Jody Mishan, (808) 295-2624 or jmishan@hawaii.rr.com

This workshop series is made possible by a grant to Catholic Charities Hawai'i from the Administration for Community Living/Administration on Aging for the *Alzheimer's Disease Programs Initiative*
